The line $y=\frac{3}{2}x-4$ does not pass through the center of dilation, so the dilated line will be distinct from $y=\frac{3}{2}x-4$. Since a dilation preserves parallelism, the line $y=\frac{3}{2}x-4$ and its image will be parallel, with slopes of $\frac{3}{2}$. To obtain the y-intercept of the dilated line, the scale factor of the dilation, $\frac{3}{4}$, can be applied to the y-intercept, $(0,-4)$. Therefore, $\left(0\cdot\frac{3}{4},-4\cdot\frac{3}{4}\right)\rightarrow(0,-3)$. So the equation of the dilated line is $y=\frac{3}{2}x-3$.
