138TH EXAMINATION

SPHERIC TRIGONOMETRY

Tuesday, June 16, 1896—1:15 to 4:15 p. m., only

100 credits, necessary to pass, 75

Answer 10 questions but no more. If more than 10 questions are answered only the first 10 of these answers will be considered. Division of groups is not allowed. In a spheric triangle  $A$ ,  $B$  and  $C$  represent the angles and  $a$ ,  $b$  and  $c$  the opposite sides. In a right triangle  $C$  represents the right angle and  $c$  the hypotenuse. Each complete answer will receive 10 credits.

- 1 Define *spheric angle*, *oblique spheric triangle*, *polar triangle*, *quadrantal triangle*, *Napier's circular parts*.
- 2 Prove that each angle of a spheric triangle is greater than the difference between  $180^\circ$  and the sum of the other two angles.
- 3 Prove that the hypotenuse of a right spheric triangle is less than  $90^\circ$  only when both the other sides are in the same quadrant.
- 4 Prove that the half sum of two sides of any spheric triangle is in the same quadrant as the half sum of the opposite angles.
- 5-6 Prove that in a right spheric triangle  $\sin A = \frac{\cos B}{\cos b}$ ;  
 $\cos c = \cot A \cot B$ .
- 7-8 Prove that in a spheric triangle  $\cos A = \sin B \sin C \cos a - \cos B \cos C$ .
- 9 Show how to obtain the formulas for finding  $a$ ,  $B$  and  $C$  of a quadrantal triangle when  $A$  and  $b$  are given and  $c = 90^\circ$ .
- 10 What formulas should be used to find  $B$ ,  $a$  and  $b$  of a right spheric triangle when  $A$  and  $c$  are given? What formula includes all the required parts?
- 11-12 Deduce the formulas for finding  $A$ ,  $B$  and  $C$  of any spheric triangle when  $a$ ,  $b$  and  $c$  are given.
- 13 Show what formulas must be used to find the length of a degree of longitude on the earth's surface for a place whose latitude is  $l$ ,  $r$  representing the radius of the earth.
- 14-15 Given the sun's altitude  $a$  and its declination  $d$ ; derive the formula to find  $t$ , the hour of the day, for a place whose latitude is  $l$ .
