The University of the State of New York
REGENTS HIGH SCHOOL EXAMINATION

ALGEBRA II
(Common Core)
Friday, June 16, 2017 — 1:15 to 4:15 p.m., only

Student Name _____________________________________________________________

School Name ______________________________________________________________

The possession or use of any communications device is strictly prohibited when taking
this examination. If you have or use any communications device, no matter how briefly,
your examination will be invalidated and no score will be calculated for you.

Print your name and the name of your school on the lines above.

A separate answer sheet for Part I has been provided to you. Follow the instructions from the
proctor for completing the student information on your answer sheet.

This examination has four parts, with a total of 37 questions. You must answer all questions in this
examination. Record your answers to the Part I multiple-choice questions on the separate answer
sheet. Write your answers to the questions in Parts II, III, and IV directly in this booklet. All work
should be written in pen, except for graphs and drawings, which should be done in pencil. Clearly
indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts,
etc. Utilize the information provided for each question to determine your answer. Note that diagrams
are not necessarily drawn to scale.

The formulas that you may need to answer some questions in this examination are found at the
end of the examination. This sheet is perforated so you may remove it from this booklet.

Scrap paper is not permitted for any part of this examination, but you may use the blank spaces
in this booklet as scrap paper. A perforated sheet of scrap graph paper is provided at the end of this
booklet for any question for which graphing may be helpful but is not required. You may remove
this sheet from this booklet. Any work done on this sheet of scrap graph paper will not be scored.

When you have completed the examination, you must sign the statement printed at the end
of the answer sheet, indicating that you had no unlawful knowledge of the questions or answers
prior to the examination and that you have neither given nor received assistance in answering any of
the questions during the examination. Your answer sheet cannot be accepted if you fail to sign this
declaration.

Notice …

A graphing calculator and a straightedge (ruler) must be available for you to use while
taking this examination.

DO NOT OPEN THIS EXAMINATION BOOKLET UNTIL THE SIGNAL IS GIVEN.
Part I

Answer all 24 questions in this part. Each correct answer will receive 2 credits. No partial credit will be allowed. Utilize the information provided for each question to determine your answer. Note that diagrams are not necessarily drawn to scale. For each statement or question, choose the word or expression that, of those given, best completes the statement or answers the question. Record your answers on your separate answer sheet.  

1. The graph of the function \( p(x) \) is sketched below.

Use this space for computations.

![Graph of \( p(x) \)]

Which equation could represent \( p(x) \)?

1. \( p(x) = (x^2 - 9)(x - 2) \)
2. \( p(x) = x^3 - 2x^2 + 9x + 18 \)
3. \( p(x) = (x^2 + 9)(x - 2) \)
4. \( p(x) = x^3 + 2x^2 - 9x - 18 \)

2. What is the solution to \( 8(2^x + 3) = 48 \)?

1. \( x = \frac{\ln 6}{\ln 2} - 3 \)
2. \( x = 0 \)
3. \( x = \frac{\ln 48}{\ln 16} - 3 \)
4. \( x = \ln 4 - 3 \)
3 Cheap and Fast gas station is conducting a consumer satisfaction survey. Which method of collecting data would most likely lead to a biased sample?

(1) interviewing every 5th customer to come into the station
(2) interviewing customers chosen at random by a computer at the checkout
(3) interviewing customers who call an 800 number posted on the customers' receipts
(4) interviewing every customer who comes into the station on a day of the week chosen at random out of a hat

4 The expression \( 6x^3(-4x + 5) \) is equivalent to

(1) \( 2x - 5i \)
(2) \( -24x^2 - 30xi \)
(3) \( -24x^2 + 30x - i \)
(4) \( 26x - 24x^2i - 5i \)

5 If \( f(x) = 3|x| - 1 \) and \( g(x) = 0.03x^3 - x + 1 \), an approximate solution for the equation \( f(x) = g(x) \) is

(1) 1.96
(2) 11.29
(3) \((-0.99, 1.96)\)
(4) \((11.29, 32.87)\)

6 Given the parent function \( p(x) = \cos x \), which phrase best describes the transformation used to obtain the graph of \( g(x) = \cos(x + a) - b \), if \( a \) and \( b \) are positive constants?

(1) right \( a \) units, up \( b \) units
(2) right \( a \) units, down \( b \) units
(3) left \( a \) units, up \( b \) units
(4) left \( a \) units, down \( b \) units
7 The solution to the equation $4x^2 + 98 = 0$ is

(1) $\pm 7$  
(2) $\pm 7i$  
(3) $\pm \frac{7\sqrt{2}}{2}$  
(4) $\pm \frac{7i\sqrt{2}}{2}$

8 Which equation is represented by the graph shown below?

![Graph of a cosine function](image)

(1) $y = \frac{1}{2} \cos 2x$  
(2) $y = \cos x$  
(3) $y = \frac{1}{2} \cos x$  
(4) $y = 2 \cos \frac{1}{2}x$

9 A manufacturing company has developed a cost model, $C(x) = 0.15x^3 + 0.01x^2 + 2x + 120$, where $x$ is the number of items sold, in thousands. The sales price can be modeled by $S(x) = 30 - 0.01x$. Therefore, revenue is modeled by $R(x) = x \cdot S(x)$.

The company's profit, $P(x) = R(x) - C(x)$, could be modeled by

(1) $0.15x^3 + 0.02x^2 - 28x + 120$  
(2) $-0.15x^3 - 0.02x^2 + 28x - 120$  
(3) $-0.15x^3 + 0.01x^2 - 2.01x - 120$  
(4) $-0.15x^3 + 32x + 120$
A game spinner is divided into 6 equally sized regions, as shown in the diagram below.

For Miles to win, the spinner must land on the number 6. After spinning the spinner 10 times, and losing all 10 times, Miles complained that the spinner is unfair. At home, his dad ran 100 simulations of spinning the spinner 10 times, assuming the probability of winning each spin is \( \frac{1}{6} \). The output of the simulation is shown in the diagram below.

Which explanation is appropriate for Miles and his dad to make?

1. The spinner was likely unfair, since the number 6 failed to occur in about 20% of the simulations.
2. The spinner was likely unfair, since the spinner should have landed on the number 6 by the sixth spin.
3. The spinner was likely not unfair, since the number 6 failed to occur in about 20% of the simulations.
4. The spinner was likely not unfair, since in the output the player wins once or twice in the majority of the simulations.
11. Which binomial is a factor of \(x^4 - 4x^2 - 4x + 8\)?

(1) \(x - 2\) \hspace{1cm} (3) \(x - 4\)
(2) \(x + 2\) \hspace{1cm} (4) \(x + 4\)

12. Given that \(\sin^2 \theta + \cos^2 \theta = 1\) and \(\sin \theta = -\frac{\sqrt{2}}{5}\), what is a possible value of \(\cos \theta\)?

(1) \(\frac{5 + \sqrt{2}}{5}\) \hspace{1cm} (3) \(\frac{3\sqrt{3}}{5}\)
(2) \(\frac{\sqrt{23}}{5}\) \hspace{1cm} (4) \(\frac{\sqrt{35}}{5}\)

13. A student studying public policy created a model for the population of Detroit, where the population decreased 25% over a decade. He used the model \(P = 714(0.75)^d\), where \(P\) is the population, in thousands, \(d\) decades after 2010. Another student, Suzanne, wants to use a model that would predict the population after \(y\) years. Suzanne’s model is best represented by

(1) \(P = 714(0.6500)^y\) \hspace{1cm} (3) \(P = 714(0.9716)^y\)
(2) \(P = 714(0.8500)^y\) \hspace{1cm} (4) \(P = 714(0.9750)^y\)

14. The probability that Gary and Jane have a child with blue eyes is 0.25, and the probability that they have a child with blond hair is 0.5. The probability that they have a child with both blue eyes and blond hair is 0.125. Given this information, the events blue eyes and blond hair are

I: dependent
II: independent
III: mutually exclusive

(1) I, only \hspace{1cm} (3) I and III
(2) II, only \hspace{1cm} (4) II and III
15 Based on climate data that have been collected in Bar Harbor, Maine, the average monthly temperature, in degrees F, can be modeled by the equation \( B(x) = 23.914\sin(0.508x - 2.116) + 55.300 \). The same governmental agency collected average monthly temperature data for Phoenix, Arizona, and found the temperatures could be modeled by the equation \( P(x) = 20.238\sin(0.525x - 2.148) + 86.729 \).

Which statement can not be concluded based on the average monthly temperature models \( x \) months after starting data collection?

(1) The average monthly temperature variation is more in Bar Harbor than in Phoenix.
(2) The midline average monthly temperature for Bar Harbor is lower than the midline temperature for Phoenix.
(3) The maximum average monthly temperature for Bar Harbor is \( 79^\circ F \), to the nearest degree.
(4) The minimum average monthly temperature for Phoenix is \( 20^\circ F \), to the nearest degree.

16 For \( x \neq 0 \), which expressions are equivalent to one divided by the sixth root of \( x \)?

\[
\begin{align*}
&\text{I. } \frac{6\sqrt[6]{x}}{\sqrt{3x}} \\
&\text{II. } x^{\frac{1}{6}} \\
&\text{III. } x^{-\frac{1}{6}} \\
\end{align*}
\]

(1) I and II, only  
(2) I and III, only  
(3) II and III, only  
(4) I, II, and III

17 A parabola has its focus at (1,2) and its directrix is \( y = -2 \). The equation of this parabola could be

(1) \( y = 8(x + 1)^2 \)  
(2) \( y = \frac{1}{8}(x + 1)^2 \)  
(3) \( y = 8(x - 1)^2 \)  
(4) \( y = \frac{1}{8}(x - 1)^2 \)
18 The function \( p(t) = 110e^{0.03922t} \) models the population of a city, in millions, \( t \) years after 2010. As of today, consider the following two statements:

I. The current population is 110 million.

II. The population increases continuously by approximately 3.9% per year.

This model supports

(1) I, only  (3) both I and II
(2) II, only  (4) neither I nor II

19 To solve \( \frac{2x}{x - 2} - \frac{11}{x} = \frac{8}{x^2 - 2x} \), Ren multiplied both sides by the least common denominator. Which statement is true?

(1) 2 is an extraneous solution.

(2) \( \frac{7}{2} \) is an extraneous solution.

(3) 0 and 2 are extraneous solutions.

(4) This equation does not contain any extraneous solutions.

20 Given \( f(9) = -2 \), which function can be used to generate the sequence \(-8, -7.25, -6.5, -5.75, \ldots\)?

(1) \( f(n) = -8 + 0.75n \)

(2) \( f(n) = -8 - 0.75(n - 1) \)

(3) \( f(n) = -8.75 + 0.75n \)

(4) \( f(n) = -0.75 + 8(n - 1) \)

21 The function \( f(x) = 2^{-0.25x} \sin\left(\frac{\pi x}{2}\right) \) represents a damped sound wave function. What is the average rate of change for this function on the interval \([-7, 7]\), to the nearest hundredth?

(1) \(-3.66\)  (3) \(-0.26\)

(2) \(-0.30\)  (4) \(3.36\)
22 Mallory wants to buy a new window air conditioning unit. The cost for the unit is $329.99. If she plans to run the unit three months out of the year for an annual operating cost of $108.78, which function models the cost per year over the lifetime of the unit, \( C(n) \), in terms of the number of years, \( n \), that she owns the air conditioner?

(1) \( C(n) = 329.99 + 108.78n \)
(2) \( C(n) = 329.99 + 326.34n \)
(3) \( C(n) = \frac{329.99 + 108.78n}{n} \)
(4) \( C(n) = \frac{329.99 + 326.34n}{n} \)

23 The expression \( \frac{-3x^2 - 5x + 2}{x^3 + 2x^2} \) can be rewritten as

(1) \( \frac{-3x - 3}{x^2 + 2x} \)
(2) \( \frac{-3x - 1}{x^2} \)
(3) \( -3x^{-1} + 1 \)
(4) \( -3x^{-1} + x^{-2} \)

24 Jasmine decides to put $100 in a savings account each month. The account pays 3% annual interest, compounded monthly. How much money, \( S \), will Jasmine have after one year?

(1) \( S = 100(1.03)^{12} \)
(2) \( S = \frac{100 - 100(1.0025)^{12}}{1 - 1.0025} \)
(3) \( S = 100(1.0025)^{12} \)
(4) \( S = \frac{100 - 100(1.03)^{12}}{1 - 1.03} \)
Given $r(x) = x^3 - 4x^2 + 4x - 6$, find the value of $r(2)$.

What does your answer tell you about $x - 2$ as a factor of $r(x)$? Explain.
26 The weight of a bag of pears at the local market averages 8 pounds with a standard deviation of 0.5 pound. The weights of all the bags of pears at the market closely follow a normal distribution. Determine what percentage of bags, to the nearest integer, weighed less than 8.25 pounds.

27 Over the set of integers, factor the expression \(4x^3 - x^2 + 16x - 4\) completely.
The graph below represents the height above the ground, $h$, in inches, of a point on a triathlete’s bike wheel during a training ride in terms of time, $t$, in seconds.

Identify the period of the graph and describe what the period represents in this context.
29 Graph $y = 400(0.85)^{2x} - 6$ on the set of axes below.
30 Solve algebraically for all values of $x$:

$$\sqrt{x - 4} + x = 6$$

31 Write $\sqrt[3]{x} \cdot \sqrt{x}$ as a single term with a rational exponent.
Data collected about jogging from students with two older siblings are shown in the table below.

<table>
<thead>
<tr>
<th></th>
<th>Neither Sibling Jogs</th>
<th>One Sibling Jogs</th>
<th>Both Siblings Jog</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student Does Not Jog</td>
<td>1168</td>
<td>1823</td>
<td>1380</td>
</tr>
<tr>
<td>Student Jogs</td>
<td>188</td>
<td>416</td>
<td>400</td>
</tr>
</tbody>
</table>

Using these data, determine whether a student with two older siblings is more likely to jog if one sibling jogs or if both siblings jog. Justify your answer.
33 Solve the following system of equations algebraically for all values of $x$, $y$, and $z$:

\[
\begin{align*}
  x + y + z &= 1 \\
  2x + 4y + 6z &= 2 \\
  -x + 3y - 5z &= 11
\end{align*}
\]
Jim is looking to buy a vacation home for $172,600 near his favorite southern beach. The formula to compute a mortgage payment, $M$, is

$$M = P \cdot \frac{r(1 + r)^N}{(1 + r)^N - 1}$$

where $P$ is the principal amount of the loan, $r$ is the monthly interest rate, and $N$ is the number of monthly payments. Jim’s bank offers a monthly interest rate of 0.305% for a 15-year mortgage.

With no down payment, determine Jim’s mortgage payment, rounded to the nearest dollar.

Algebraically determine and state the down payment, rounded to the nearest dollar, that Jim needs to make in order for his mortgage payment to be $1100.
Graph \( y = \log_2(x + 3) - 5 \) on the set of axes below. Use an appropriate scale to include both intercepts.

Describe the behavior of the given function as \( x \) approaches \(-3\) and as \( x \) approaches positive infinity.
Charlie’s Automotive Dealership is considering implementing a new check-in procedure for customers who are bringing their vehicles for routine maintenance. The dealership will launch the procedure if 50% or more of the customers give the new procedure a favorable rating when compared to the current procedure. The dealership devises a simulation based on the minimal requirement that 50% of the customers prefer the new procedure. Each dot on the graph below represents the proportion of the customers who preferred the new check-in procedure, each of sample size 40, simulated 100 times.

Assume the set of data is approximately normal and the dealership wants to be 95% confident of its results. Determine an interval containing the plausible sample values for which the dealership will launch the new procedure. Round your answer to the nearest hundredth.

Forty customers are selected randomly to undergo the new check-in procedure and the proportion of customers who prefer the new procedure is 32.5%. The dealership decides not to implement the new check-in procedure based on the results of the study. Use statistical evidence to explain this decision.
A radioactive substance has a mass of 140 g at 3 p.m. and 100 g at 8 p.m. Write an equation in the form \( A = A_0 \left( \frac{1}{2} \right)^{\frac{t}{h}} \) that models this situation, where \( h \) is the constant representing the number of hours in the half-life, \( A_0 \) is the initial mass, and \( A \) is the mass \( t \) hours after 3 p.m.

Using this equation, solve for \( h \), to the nearest ten thousandth.

Determine when the mass of the radioactive substance will be 40 g. Round your answer to the nearest tenth of an hour.
Scrap Graph Paper — This sheet will *not* be scored.
Scrap Graph Paper — This sheet will *not* be scored.
# High School Math Reference Sheet

1 inch = 2.54 centimeters  
1 meter = 39.37 inches  
1 mile = 5280 feet  
1 mile = 1760 yards  
1 mile = 1.609 kilometers  
1 kilometer = 0.62 mile  
1 pound = 16 ounces  
1 pound = 0.454 kilogram  
1 gallon = 4 quarts  
1 ton = 2000 pounds  
1 cup = 8 fluid ounces  
1 pint = 2 cups  
1 quart = 2 pints  
1 gallon = 3.785 liters  
1 liter = 0.264 gallon  
1 liter = 1000 cubic centimeters

Mechanics of Rating

The following procedures are to be followed for scoring student answer papers for the Regents Examination in Algebra II (Common Core). More detailed information about scoring is provided in the publication Information Booklet for Scoring the Regents Examination in Algebra II (Common Core).

Do not attempt to correct the student’s work by making insertions or changes of any kind. In scoring the constructed-response questions, use check marks to indicate student errors. Unless otherwise specified, mathematically correct variations in the answers will be allowed. Units need not be given when the wording of the questions allows such omissions.

Each student’s answer paper is to be scored by a minimum of three mathematics teachers. No one teacher is to score more than approximately one-third of the constructed-response questions on a student’s paper. Teachers may not score their own students’ answer papers. On the student’s separate answer sheet, for each question, record the number of credits earned and the teacher’s assigned rater/scorer letter.

Schools are not permitted to rescore any of the open-ended questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.

Raters should record the student’s scores for all questions and the total raw score on the student’s separate answer sheet. Then the student’s total raw score should be converted to a scale score by using the conversion chart that will be posted on the Department’s web site at: http://www.p12.nysed.gov/assessment/ by Friday, June 16, 2017. Because scale scores corresponding to raw scores in the conversion chart may change from one administration to another, it is crucial that, for each administration, the conversion chart provided for that administration be used to determine the student’s final score. The student’s scale score should be entered in the box provided on the student’s separate answer sheet. The scale score is the student’s final examination score.
If the student’s responses for the multiple-choice questions are being hand scored prior to being scanned, the scorer must be careful not to make any marks on the answer sheet except to record the scores in the designated score boxes. Marks elsewhere on the answer sheet will interfere with the accuracy of the scanning.

**Part I**

Allow a total of 48 credits, 2 credits for each of the following.

<table>
<thead>
<tr>
<th>(1) . . . 1 . . .</th>
<th>(9) . . . 2 . . .</th>
<th>(17) . . . 4 . . .</th>

Updated information regarding the rating of this examination may be posted on the New York State Education Department’s web site during the rating period. Check this web site at: [http://www.p12.nysed.gov/assessment/](http://www.p12.nysed.gov/assessment/) and select the link “Scoring Information” for any recently posted information regarding this examination. This site should be checked before the rating process for this examination begins and several times throughout the Regents Examination period.

The Department is providing supplemental scoring guidance, the “Model Response Set,” for the Regents Examination in Algebra II (Common Core). This guidance is recommended to be part of the scorer training. Schools are encouraged to incorporate the Model Response Sets into the scorer training or to use them as additional information during scoring. While not reflective of all scenarios, the model responses selected for the Model Response Set illustrate how less common student responses to constructed-response questions may be scored. The Model Response Set will be available on the Department’s web site at [http://www.nysedregents.org/algebratwo/](http://www.nysedregents.org/algebratwo/).
General Rules for Applying Mathematics Rubrics

I. General Principles for Rating

The rubrics for the constructed-response questions on the Regents Examination in Algebra II (Common Core) are designed to provide a systematic, consistent method for awarding credit. The rubrics are not to be considered all-inclusive; it is impossible to anticipate all the different methods that students might use to solve a given problem. Each response must be rated carefully using the teacher’s professional judgment and knowledge of mathematics; all calculations must be checked. The specific rubrics for each question must be applied consistently to all responses. In cases that are not specifically addressed in the rubrics, raters must follow the general rating guidelines in the publication Information Booklet for Scoring the Regents Examination in Algebra II (Common Core), use their own professional judgment, confer with other mathematics teachers, and/or contact the State Education Department for guidance. During each Regents Examination administration period, rating questions may be referred directly to the Education Department. The contact numbers are sent to all schools before each administration period.

II. Full-Credit Responses

A full-credit response provides a complete and correct answer to all parts of the question. Sufficient work is shown to enable the rater to determine how the student arrived at the correct answer.

When the rubric for the full-credit response includes one or more examples of an acceptable method for solving the question (usually introduced by the phrase “such as”), it does not mean that there are no additional acceptable methods of arriving at the correct answer. Unless otherwise specified, mathematically correct alternative solutions should be awarded credit. The only exceptions are those questions that specify the type of solution that must be used; e.g., an algebraic solution or a graphic solution. A correct solution using a method other than the one specified is awarded half the credit of a correct solution using the specified method.

III. Appropriate Work

Full-Credit Responses: The directions in the examination booklet for all the constructed-response questions state: “Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc.” The student has the responsibility of providing the correct answer and showing how that answer was obtained. The student must “construct” the response; the teacher should not have to search through a group of seemingly random calculations scribbled on the student paper to ascertain what method the student may have used.

Responses With Errors: Rubrics that state “Appropriate work is shown, but…” are intended to be used with solutions that show an essentially complete response to the question but contain certain types of errors, whether computational, rounding, graphing, or conceptual. If the response is incomplete; i.e., an equation is written but not solved or an equation is solved but not all of the parts of the question are answered, appropriate work has not been shown. Other rubrics address incomplete responses.

IV. Multiple Errors

Computational Errors, Graphing Errors, and Rounding Errors: Each of these types of errors results in a 1-credit deduction. Any combination of two of these types of errors results in a 2-credit deduction. No more than 2 credits should be deducted for such mechanical errors in a 4-credit question and no more than 3 credits should be deducted in a 6-credit question. The teacher must carefully review the student’s work to determine what errors were made and what type of errors they were.

Conceptual Errors: A conceptual error involves a more serious lack of knowledge or procedure. Examples of conceptual errors include using the incorrect formula for the area of a figure, choosing the incorrect trigonometric function, or multiplying the exponents instead of adding them when multiplying terms with exponents.

If a response shows repeated occurrences of the same conceptual error, the student should not be penalized twice. If the same conceptual error is repeated in responses to other questions, credit should be deducted in each response.

For 4- and 6-credit questions, if a response shows one conceptual error and one computational, graphing, or rounding error, the teacher must award credit that takes into account both errors. Refer to the rubric for specific scoring guidelines.
Part II
For each question, use the specific criteria to award a maximum of 2 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(25)  [2] −6, and a correct explanation is written.

[1] One computational error is made.

or

[1] One conceptual error is made.

or

[1] −6, but the explanation is incorrect or missing.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(26)  [2] 69, and correct work is shown.

[1] Appropriate work is shown, but one computational error or rounding error is made.

or

[1] Appropriate work is shown, but one conceptual error is made.

or

[1] 69, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(27)  

[2] 

\[(x^2 + 4)(4x - 1)\] and correct work is shown.

[1] Appropriate work is shown, but one factoring error is made.

or

[1] Appropriate work is shown, but one conceptual error is made.

or

[1] \[x^2(4x - 1) + 4(4x - 1)\] is written, but no further correct work is shown.

or

[1] \[(x^2 + 4)(4x - 1)\], but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(28)  

[2] \[\frac{2}{3}\] and a correct description is written.

[1] One computational error is made.

or

[1] One conceptual error is made.

or

[1] \[\frac{2}{3}\], but the description is incomplete or missing.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(29)  

[1] One computational or graphing error is made.

or

[1] One conceptual error is made.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(30) [2] 5 and correct algebraic work is shown.
   [1] Appropriate work is shown, but one computational or simplification error is made.
       or
   [1] Appropriate work is shown, but one conceptual error is made.
       or
   [1] Appropriate work is shown, but 8 is not rejected.
       or
   [1] 5, but a method other than algebraic is used.
       or
   [1] 5, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(31) [2] $\frac{5}{6}$ and correct work is shown.
   [1] Appropriate work is shown, but one computational error is made.
       or
   [1] Appropriate work is shown, but one conceptual error is made.
       or
   [1] $\frac{5}{6}$, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(32) [2] Both siblings jog and a correct justification is given.
   [1] Appropriate work is shown, but one computational error is made.
       or
   [1] Appropriate work is shown, but one conceptual error is made.

[0] Both siblings jog, but no justification is given.
       or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
Part III

For each question, use the specific criteria to award a maximum of 4 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(33) [4] \( x = 0, y = 2, \) and \( z = -1, \) and correct algebraic work is shown.

[3] Appropriate work is shown, but one computational error is made.

\textit{or}

[3] Appropriate work is shown to find two solutions, but no further correct work is shown.

[2] Appropriate work is shown, but two or more computational errors are made.

\textit{or}

[2] Appropriate work is shown, but one conceptual error is made.

\textit{or}

[2] Appropriate work is shown to find one solution, but no further correct work is shown.

\textit{or}

[2] \( x = 0, y = 2, \) and \( z = -1, \) but a method other than algebraic is used.

[1] Appropriate work is shown, but one conceptual error and one computational error are made.

\textit{or}

[1] Appropriate work is shown to eliminate a variable in order to create a system of two equations, but no further correct work is shown.

\textit{or}

[1] \( x = 0, y = 2, \) and \( z = -1, \) but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(34)  [4] 1247 and 20,407, and correct work is shown.

[3] Appropriate work is shown, but one computational or rounding error is made.

or

[3] Appropriate work is shown to find 1247 and 152,193, but no further correct work is shown.

[2] Appropriate work is shown, but two or more computational or rounding errors are made.

or

[2] Appropriate work is shown, but one conceptual error is made.

or

[2] Appropriate work is shown to find 1247 or 20,407, but no further correct work is shown.

or

[2] 1247 and 20,407, but no work is shown.

[1] Appropriate work is shown, but one conceptual error and one computational or rounding error are made.

or

[1] A correct substitution is made in the mortgage payment formula, but no further correct work is shown.

or

[1] 1247 or 20,407, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(35) A correct graph is drawn and a correct description is given, such as \( x \to -3 \), 
\( y \to -\infty \), and as \( x \to \infty \), \( y \to \infty \).

[4] Appropriate work is shown, but one computational or graphing error is made.

[3] Appropriate work is shown, but two or more computational or graphing errors are made.

or

[2] Appropriate work is shown, but one conceptual error is made.

or

[2] A correct description is given, but no further correct work is shown.

or

[2] A correct graph is drawn, but no further correct work is shown.

[1] Appropriate work is shown, but one conceptual error and one computational or graphing error are made.

or

[1] As \( x \to -3 \), \( y \to -\infty \), or as \( x \to \infty \), \( y \to \infty \).

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
A correct interval is stated, such as (0.35, 0.66), and correct work is shown, and a correct explanation is written.

Appropriate work is shown, but one computational or rounding error is made.

or

Appropriate work is shown, but the sample proportion is used to find the interval.

Appropriate work is shown, but two or more computational or rounding errors are made.

or

Appropriate work is shown, but one conceptual error is made.

or

A correct interval, and correct work is shown, but no further correct work is shown.

or

A correct explanation is written, but no further correct work is shown.

Appropriate work is shown but one conceptual error and one computational or rounding error are made.

A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
Part IV

For each question, use the specific criteria to award a maximum of 6 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

\[(37)\]

[6] \(100 = 140 \left( \frac{1}{2} \right)^{\frac{5}{h}} \) or equivalent, 10.3002, 18.6, and correct work is shown.

[5] Appropriate work is shown, but one computational, rounding, or notation error is made.

[4] Appropriate work is shown, but two computational or rounding errors are made.

\[\text{or}\]

[4] Appropriate work is shown, but one conceptual error is made.

[3] Appropriate work is shown, but one conceptual error and one computational error are made.

\[\text{or}\]

[3] Appropriate work is shown to find 10.3002, but no further correct work is shown.

[2] Appropriate work is shown, but one conceptual error and two or more computational or rounding errors are made.

\[\text{or}\]

[2] Appropriate work is shown, but two conceptual errors are made.

\[\text{or}\]

[2] Appropriate work is shown to find 18.6, but no further correct work is shown.

\[\text{or}\]

[2] 10.3002 and 18.6, but no work is shown.

[1] \(100 = 140 \left( \frac{1}{2} \right)^{\frac{5}{h}}\), but no further correct work is shown.

\[\text{or}\]

[1] 10.3002 or 18.6, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

The Chart for Determining the Final Examination Score for the June 2017 Regents Examination in Algebra II (Common Core) will be posted on the Department’s web site at: http://www.p12.nysed.gov/assessment/ by Friday, June 16, 2017. Conversion charts provided for previous administrations of the Regents Examination in Algebra II (Common Core) must NOT be used to determine students’ final scores for this administration.

Online Submission of Teacher Evaluations of the Test to the Department

Suggestions and feedback from teachers provide an important contribution to the test development process. The Department provides an online evaluation form for State assessments. It contains spaces for teachers to respond to several specific questions and to make suggestions. Instructions for completing the evaluation form are as follows:

2. Select the test title.

3. Complete the required demographic fields.

4. Complete each evaluation question and provide comments in the space provided.

5. Click the SUBMIT button at the bottom of the page to submit the completed form.
The University of the State of New York
REGENTS HIGH SCHOOL EXAMINATION

ALGEBRA II (Common Core)

Friday, June 16, 2017 — 1:15 to 4:15 p.m.

MODEL RESPONSE SET

Table of Contents

Question 25 . . . . . . . . . . . . . . . . . . . 2
Question 26 . . . . . . . . . . . . . . . . . . . 7
Question 27 . . . . . . . . . . . . . . . . . . . 12
Question 28 . . . . . . . . . . . . . . . . . . . 17
Question 29 . . . . . . . . . . . . . . . . . . . 21
Question 30 . . . . . . . . . . . . . . . . . . . 26
Question 31 . . . . . . . . . . . . . . . . . . . 30
Question 32 . . . . . . . . . . . . . . . . . . . 36
Question 33 . . . . . . . . . . . . . . . . . . . 40
Question 34 . . . . . . . . . . . . . . . . . . . 47
Question 35 . . . . . . . . . . . . . . . . . . . 53
Question 36 . . . . . . . . . . . . . . . . . . . 59
Question 37 . . . . . . . . . . . . . . . . . . . 67
Given \( r(x) = x^3 - 4x^2 + 4x - 6 \), find the value of \( r(2) \).

\[
\begin{align*}
  r(x) &= x^3 - 4x^2 + 4x - 6 \\
  r(2) &= (2)^3 - 4(2)^2 + 4(2) - 6 \\
  r(2) &= 8 - 4(4) + 8 - 6 \\
  r(2) &= -6
\end{align*}
\]

What does your answer tell you about \( x - 2 \) as a factor of \( r(x) \)? Explain.

\( x - 2 \) would not be a factor of \( r(x) \) because when doing substitution in this problem \( x = 2 \) because \( x - 2 = 0 \) and when 2 was plugged into the equation for \( x \) that was not zero.

Score 2: The student gave a complete and correct response.
25 Given \( r(x) = x^3 - 4x^2 + 4x - 6 \), find the value of \( r(2) \).

\[
\begin{array}{c|cccc}
2 & 1 & -4 & 4 & -6 \\
& & 2 & -4 & 0 \\
\hline
& 1 & -2 & 0 & -6 \\
\end{array}
\]

\[ r(2) = -6 \]

What does your answer tell you about \( x - 2 \) as a factor of \( r(x) \)? Explain.

\((x - 2)\) is not a factor of \( r(x) \) because the remainder was -6 and not 0.

Score 2: The student gave a complete and correct response.
Given \( r(x) = x^3 - 4x^2 + 4x - 6 \), find the value of \( r(2) \).

\[
\begin{align*}
   r(2) &= 2^3 - 4(2)^2 + 4(2) - 6 \\
   &= 8 - 16 + 8 - 6 \\
   &= -6
\end{align*}
\]

What does your answer tell you about \( x - 2 \) as a factor of \( r(x) \)? Explain.

\[
\begin{align*}
   x - 2 \text{ is not a factor of} \\
   x^3 - 4x^2 + 4x - 6
\end{align*}
\]

Score 1: The student gave an incomplete explanation.
25 Given \( r(x) = x^3 - 4x^2 + 4x - 6 \), find the value of \( r(2) \).

\[
\begin{align*}
\text{Let } r(2) & = 2^3 - 4(2)^2 + 4(2) - 6 \\
& = 8 - 16 + 8 - 6 \\
& = 0
\end{align*}
\]

What does your answer tell you about \( x - 2 \) as a factor of \( r(x) \)? Explain.

\( x - 2 \) is a factor of \( r(x) \) since the remainder would be zero.

**Score 1:** The student stated a correct explanation based on an incorrect value.
25 Given \( r(x) = x^3 - 4x^2 + 4x - 6 \), find the value of \( r(2) \).

\[
\begin{align*}
2^3 - 4(2)^3 + 4(2) - 6 &= r(2) \\
r(2) &= -22
\end{align*}
\]

What does your answer tell you about \( x - 2 \) as a factor of \( r(x) \)? Explain.

the other factor could be positive since
the answer is negative and one of the factors is negative

Score 0: The student gave a completely incorrect response.
The weight of a bag of pears at the local market averages 8 pounds with a standard deviation of 0.5 pound. The weights of all the bags of pears at the market closely follow a normal distribution. Determine what percentage of bags, to the nearest integer, weighed less than 8.25 pounds.

Score 2: The student gave a complete and correct response.
The weight of a bag of pears at the local market averages 8 pounds with a standard deviation of 0.5 pound. The weights of all the bags of pears at the market closely follow a normal distribution. Determine what percentage of bags, to the nearest integer, weighed less than 8.25 pounds.

Score 2: The student gave a complete and correct response.
The weight of a bag of pears at the local market averages 8 pounds with a standard deviation of 0.5 pound. The weights of all the bags of pears at the market closely follow a normal distribution. Determine what percentage of bags, to the nearest integer, weighed less than 8.25 pounds.

Score 1: The student made an error by not converting to a percent correctly.
The weight of a bag of pears at the local market averages 8 pounds with a standard deviation of 0.5 pound. The weights of all the bags of pears at the market closely follow a normal distribution. Determine what percentage of bags, to the nearest integer, weighed less than 8.25 pounds.

Score 1: The student made a rounding error.
The weight of a bag of pears at the local market averages 8 pounds with a standard deviation of 0.5 pound. The weights of all the bags of pears at the market closely follow a normal distribution. Determine what percentage of bags, to the nearest integer, weighed less than 8.25 pounds.

\[
\frac{x - \bar{x}}{\sigma_x} = \frac{8.25 - 8}{0.5} = \frac{0.25}{0.5} = 0.5
\]

25%

Score 0: The student gave an incorrect response.
27 Over the set of integers, factor the expression $4x^3 - x^2 + 16x - 4$ completely.

\[ 4x^3 - x^2 + 16x - 4 = x^2(4x - 1) + 4(x - 1) \]
\[ = (x^2 + 4)(4x - 1) \]

**Score 2:** The student gave a complete and correct response.
27 Over the set of integers, factor the expression $4x^3 - x^2 + 16x - 4$ completely.

\[
(x^2 + 4)(4x - 1)
\]

\[
\begin{align*}
\begin{array}{c|cc}
4x^2 - 1 & 4x + 1 & 4x - 1 \\
\hline
x^2 - 1 & 4x + 1 & 4x - 1 \\
-4 & 4x - 1 & 4x + 1 \\
\end{array}
\end{align*}
\]

\[
\begin{align*}
x^2 + 4 &= 0 \\
-x - 4 &= 0 \\
4x &= 1 \\
x &= \frac{1}{4}
\end{align*}
\]

\[
\begin{align*}
x &= \pm 2i \\
x &= \frac{1}{4}
\end{align*}
\]

**Score 1:** The student made a conceptual error by finding roots.
27 Over the set of integers, factor the expression $4x^3 - x^2 + 16x - 4$ completely.

Score 1: The student wrote $x^2(4x - 1) + 4(4x - 1)$, but showed no further correct work.
27 Over the set of integers, factor the expression $4x^3 - x^2 + 16x - 4$ completely.

\[
\begin{align*}
4x^3 & - x^2 + 16x - 4 \\
& = x(4x^2 - 1) + 16x - 4 \\
& = 4(x^2 - 1) + 16x - 4 \\
& = 4(x - 1)(x^2 + 1) + 16x - 4 \\
& = 4x^3 + 16x - x^2 - 4 \\
& = (4x - 1)(x + 2)(x + 2)
\end{align*}
\]

**Score 1:** The student made one factoring error.
27 Over the set of integers, factor the expression $4x^3 - x^2 + 16x - 4$ completely.

\[
\begin{align*}
(4x^3 - x^2) & (4x - 4) \\
-x^2 & \\
-x^2(-4x - 1) & -4(4x - 1) \\
\end{align*}
\]

Score 0: The student made multiple factoring errors.
The graph below represents the height above the ground, $h$, in inches, of a point on a triathlete’s bike wheel during a training ride in terms of time, $t$, in seconds.

Identify the period of the graph and describe what the period represents in this context.

**Score 2:** The student gave a complete and correct response.
28 The graph below represents the height above the ground, \( h \), in inches, of a point on a triathlete's bike wheel during a training ride in terms of time, \( t \), in seconds.

Identify the period of the graph and describe what the period represents in this context.

Score 1: The student did not describe the period in context.
The graph below represents the height above the ground, \( h \), in inches, of a point on a triathlete’s bike wheel during a training ride in terms of time, \( t \), in seconds.

Identify the period of the graph and describe what the period represents in this context.

\[
\frac{4}{3} - \frac{2}{3} = \frac{2}{3}
\]

\[
f(t) = 13 \cos\left(\frac{2}{3}t\right) + 13
\]

The period is \( \frac{2}{3} \) and in this context, the period represents the amount of time the rider’s wheel is in the air for.

Score 1: The student gave an incomplete description.
28 The graph below represents the height above the ground, \( h \), in inches, of a point on a triathlete’s bike wheel during a training ride in terms of time, \( t \), in seconds.

Identify the period of the graph and describe what the period represents in this context.

**Score 0:** The student gave a completely incorrect response.
29 Graph \( y = 400 \cdot (0.85)^{2x} - 6 \) on the set of axes below.

Score 2: The student gave a complete and correct response.
29 Graph $y = 400(0.85)^x - 6$ on the set of axes below.

Score 1: The student made an error graphing the $y$-intercept.
29 Graph $y = 400(0.85)^{2x} - 6$ on the set of axes below.

Score 1: The student incorrectly entered the equation as $y = 400(0.85)^{2x} - 6$. 
29 Graph $y = 400(0.85)^{2x} - 6$ on the set of axes below.

Score 0: The student made multiple graphing errors.
29 Graph \( y = 400(0.85)^2x - 6 \) on the set of axes below.

Score 0: The student made multiple graphing errors.
30 Solve algebraically for all values of x:

\[\sqrt{x - 4} + x = 6\]

\[(-x+6)(x-6)\]
\[x^2-6x-6x+36\]
\[x^2-(12x+36)\]

\[\sqrt{x-4} + x = 6\]
\[-x-x\]
\[\frac{\sqrt{x-4}}{x-4} = (x+6)^2\]
\[x-4 = x^2-12x+36\]
\[-x+4 - x+4\]
\[x^2-13x+40 = 0\]

\[(x-8)(x-5)=0\]

\[x-8=0 \quad x-5=0\]
\[+8 \quad +8 \quad +5 \quad +5\]

\[x=8, \quad x=5\]

\[\text{extraneous}\]

\[\sqrt{8-4} + 8 = 6\]
\[\sqrt{4+5} = 6\]
\[2 + 5 = 6\]
\[10 ≠ 6\]

\[\sqrt{5-4} + 5 = 6\]
\[\sqrt{1+5} = 6\]
\[1 + 5 = 6\]
\[6 = 6 \checkmark\]

Question 32

32 Data collected about jogging from students with two older siblings are shown in the table below.

<table>
<thead>
<tr>
<th></th>
<th>Neither Sibling Jogs</th>
<th>One Sibling Jogs</th>
<th>Both Siblings Jog</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student Does Not Jog</td>
<td>1168</td>
<td>1823</td>
<td>1380</td>
</tr>
<tr>
<td>Student Jogs</td>
<td>188</td>
<td>416</td>
<td>400</td>
</tr>
</tbody>
</table>

Using these data, determine whether a student with two older siblings is more likely to jog if one sibling jogs or if both siblings jog. Justify your answer.

\[
\Pr(SJ|OJ) = \frac{\Pr(SJ \cap OJ)}{\Pr(OJ)} = \frac{416}{5375} = .19
\]

\[
\Pr(SJ|BJ) = \frac{\Pr(SJ \cap BJ)}{\Pr(BJ)} = \frac{400}{5375} = .22
\]

A student is more likely to jog if both siblings jog since after calculating the probability of a student jogging given their sibling jogs, there is a higher probability for a student to jog if both do.

Score 2: The student gave a complete and correct response.
32 Data collected about jogging from students with two older siblings are shown in the table below.

<table>
<thead>
<tr>
<th></th>
<th>Neither Sibling Jogs</th>
<th>One Sibling Jogs</th>
<th>Both Siblings Jog</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student Does Not Jog</td>
<td>1168</td>
<td>1823</td>
<td>1380</td>
</tr>
<tr>
<td>Student Jogs</td>
<td>188</td>
<td>416</td>
<td>400</td>
</tr>
</tbody>
</table>

Using these data, determine whether a student with two older siblings is more likely to jog if one sibling jogs or if both siblings jog. Justify your answer.

\[
P(S\text{\, one}) = \frac{416}{2239} = 0.1858
\]

\[
P(S\text{\, two}) = \frac{400}{1780} = 0.2247
\]

more likely

Score 2: The student gave a complete and correct response.
Data collected about jogging from students with two older siblings are shown in the table below.

<table>
<thead>
<tr>
<th>Student Does Not Jog</th>
<th>Neither Sibling Jogs</th>
<th>One Sibling Jogs</th>
<th>Both Siblings Jogs</th>
</tr>

<tr>
<td></td>
<td>188</td>
<td>416</td>
<td>400</td>
</tr>
</tbody>
</table>

Using these data, determine whether a student with two older siblings is more likely to jog if one sibling jogs or if both siblings jog. Justify your answer.

\[ P(J|O) = \frac{P(J \text{ and } O)}{P(O)} = \frac{416}{2239} \]

\[ P(J|B) = \frac{P(J \text{ and } B)}{P(B)} = \frac{400}{1780} \]

\[ P(J|O) = 0.187 \approx 18.7\% \]

\[ P(J|B) = 0.225 \approx 22.5\% \]

It is more likely a student will jog if both siblings jog because the probability of a kid jogging whose siblings both jog is 22.5\%, whereas a kid with one sibling who jogs has a probability of jogging of 18.7\%.

**Score 1:** The student made a computational error evaluating \( P(J|O) \).
Question 32

Data collected about jogging from students with two older siblings are shown in the table below.

Score 0: The student gave an incorrect response.
Jim is looking to buy a vacation home for $172,600 near his favorite southern beach. The formula to compute a mortgage payment, $M$, is 

$$M = P \cdot \frac{r(1 + r)^N}{(1 + r)^N - 1}$$

where $P$ is the principal amount of the loan, $r$ is the monthly interest rate, and $N$ is the number of monthly payments. Jim's bank offers a monthly interest rate of 0.305% for a 15-year mortgage.

With no down payment, determine Jim's mortgage payment, rounded to the nearest dollar.

$$M = (172,600)(0.00305)(1.00305)^{180}$$

$$M = (172,600)(0.00305)(1.00305)^{180}$$

$$M = 1247.493394$$

Algebraically determine and state the down payment, rounded to the nearest dollar, that Jim needs to make in order for his mortgage payment to be $1100.

Let $x = \text{down payment}$

$$1100 = \frac{(172,600 - x)(0.00305)(1.00305)^{180}}{(1.00305)^{180} - 1}$$

$$(172,600 - x)(0.00305)(1.00305)^{180} = (1100)(1.00305^{180} - 1)$$

$$172,600 = \frac{1100)(1.00305^{180} - 1)}{0.00305(1.00305)^{180}}$$

$$x = 172,600 - \frac{1100)(1.00305^{180} - 1)}{0.00305(1.00305)^{180}}$$

$$x = 20,407$$

Score 4: The student gave a complete and correct response.
Jim is looking to buy a vacation home for $172,600 near his favorite southern beach. The formula to compute a mortgage payment, \( M \), is

35 Graph \( y = \log_2(x + 3) - 5 \) on the set of axes below. Use an appropriate scale to include both intercepts.

Describe the behavior of the given function as \( x \) approaches \(-3\) and as \( x \) approaches positive infinity.

Score 2: The student did not graph both intercepts and only described the right end behavior correctly.
35 Graph \( y = \log_2(x + 3) - 5 \) on the set of axes below. Use an appropriate scale to include both intercepts.

Describe the behavior of the given function as \( x \) approaches \(-3\) and as \( x \) approaches positive infinity.

As \( x \) approaches \(-3\), \( y \) approaches \(-\infty\), and as \( x \) approaches positive infinity, the number inside the logarithm increases, \( y \) increases.

Score 1: The student made one graphing error and described the end behavior incorrectly.
Graph \( y = \log_2(x + 3) - 5 \) on the set of axes below. Use an appropriate scale to include both intercepts.

Describe the behavior of the given function as \( x \) approaches \(-3\) and as \( x \) approaches positive infinity.

As \( x \) approaches \(-3\), no values will appear and as \( x \) approaches positive infinity the values start to increase gradually.

Score 0:  The student gave an incorrect response.
Charlie’s Automotive Dealership is considering implementing a new check-in procedure for customers who are bringing their vehicles for routine maintenance. The dealership will launch the procedure if 50% or more of the customers give the new procedure a favorable rating when compared to the current procedure. The dealership devises a simulation based on the minimal requirement that 50% of the customers prefer the new procedure. Each dot on the graph below represents the proportion of the customers who preferred the new check-in procedure, each of sample size 40, simulated 100 times.

Assume the set of data is approximately normal and the dealership wants to be 95% confident of its results. Determine an interval containing the plausible sample values for which the dealership will launch the new procedure. Round your answer to the nearest hundredth.

Forty customers are selected randomly to undergo the new check-in procedure and the proportion of customers who prefer the new procedure is 32.5%. The dealership decides not to implement the new check-in procedure based on the results of the study. Use statistical evidence to explain this decision.

Since there are 32.5% of the customers prefer the new procedure and this is below the 95% confidence of the population proportion, the new procedure will not be implemented.

Score 4: The student gave a complete and correct response.

Forty customers are selected randomly to undergo the new check-in procedure and the proportion of customers who prefer the new procedure is 32.5%. The dealership decides not to implement the new check-in procedure based on the results of the study. Use statistical evidence to explain this decision.

Score 3: The student used the sample to create an interval.
Charlie’s Automotive Dealership is considering implementing a new check-in procedure for customers who are bringing their vehicles for routine maintenance. The dealership will launch the procedure if 50% or more of the customers give the new procedure a favorable rating when compared to the current procedure. The dealership devises a simulation based on the minimal requirement that 50% of the customers prefer the new procedure. Each dot on the graph below represents the proportion of the customers who preferred the new check-in procedure, each of sample size 40, simulated 100 times.

Assume the set of data is approximately normal and the dealership wants to be 95% confident of its results. Determine an interval containing the plausible sample values for which the dealership will launch the new procedure. Round your answer to the nearest hundredth.

Forty customers are selected randomly to undergo the new check-in procedure and the proportion of customers who prefer the new procedure is 32.5%. The dealership decides not to implement the new check-in procedure based on the results of the study. Use statistical evidence to explain this decision.

Since 50% (0.5) is outside of the interval, the dealership should not implement the new check-in procedure.

Score 2: The student used the sample to create an interval and the 50% to explain the decision.
Charlie’s Automotive Dealership is considering implementing a new check-in procedure for customers who are bringing their vehicles for routine maintenance. The dealership will launch the procedure if 50% or more of the customers give the new procedure a favorable rating when compared to the current procedure. Forty customers are selected randomly to undergo the new check-in procedure and the proportion of customers who prefer the new procedure is 32.5%. The dealership decides not to implement the new check-in procedure based on the results of the study. Use statistical evidence to explain this decision.

There is a good chance that the result will be under 50%, as it goes as low as 35%.

Score 0: The student did not show enough correct work to receive any credit.
37 A radioactive substance has a mass of 140 g at 3 p.m. and 100 g at 8 p.m. Write an equation in the form \( A = A_0 \left( \frac{1}{2} \right)^{\frac{t}{h}} \) that models this situation, where \( h \) is the constant representing the number of hours in the half-life, \( A_0 \) is the initial mass, and \( A \) is the mass \( t \) hours after 3 p.m.

\[
100 = 140 \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

Using this equation, solve for \( h \), to the nearest ten thousandth.

Determine when the mass of the radioactive substance will be 40 g. Round your answer to the nearest tenth of an hour.

Score 6: The student gave a complete and correct response.
37 A radioactive substance has a mass of 140 g at 3 p.m. and 100 g at 8 p.m. Write an equation in the form \( A = A_0 \left( \frac{1}{2} \right)^{\frac{t}{h}} \) that models this situation, where \( h \) is the constant representing the number of hours in the half-life, \( A_0 \) is the initial mass, and \( A \) is the mass \( t \) hours after 3 p.m.

\[
100 = 140 \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

Using this equation, solve for \( h \), to the nearest ten thousandth.

\[
\frac{5}{7} = \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

\[
\log \frac{5}{7} = \frac{5}{h} \log \frac{1}{2}
\]

\[
h = \frac{5 \log \frac{1}{2}}{\log \frac{5}{7}} = 10.3002
\]

Determine when the mass of the radioactive substance will be 40 g. Round your answer to the nearest tenth of an hour.

Score 6: The student gave a complete and correct response.
37 A radioactive substance has a mass of 140 g at 3 p.m. and 100 g at 8 p.m. Write an equation in the form \( A = A_0 \left( \frac{1}{2} \right)^{\frac{t}{h}} \) that models this situation, where \( h \) is the constant representing the number of hours in the half-life, \( A_0 \) is the initial mass, and \( A \) is the mass \( t \) hours after 3 p.m.

Using this equation, solve for \( h \), to the nearest ten thousandth.

Determine when the mass of the radioactive substance will be 40 g. Round your answer to the nearest tenth of an hour.

Score 5: The student gave a partial solution for the time.
A radioactive substance has a mass of 140 g at 3 p.m. and 100 g at 8 p.m. Write an equation in the form \( A = A_0 \left( \frac{1}{2} \right)^{\frac{t}{h}} \) that models this situation, where \( h \) is the constant representing the number of hours in the half-life, \( A_0 \) is the initial mass, and \( A \) is the mass \( t \) hours after 3 p.m.

\[
100 = 140 \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

Using this equation, solve for \( h \), to the nearest ten thousandth.

\[
\frac{5}{h} = \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

\[
\log_{\frac{1}{2}} \frac{5}{h} = \frac{5}{h}
\]

\[
h = 10.3002 \text{ hours}
\]

Determine when the mass of the radioactive substance will be 40 g. Round your answer to the nearest tenth of an hour.

\[
40 = 140 \left( \frac{1}{2} \right)^{\frac{t}{10.3002}}
\]

**Score 4:** The student did not determine when the weight of the substance will be 40g.
Question 37

A radioactive substance has a mass of 140 g at 3 p.m. and 100 g at 8 p.m. Write an equation in the form \( A = A_0 \left( \frac{1}{2} \right)^{\frac{t}{h}} \) that models this situation, where \( h \) is the constant representing the number of hours in the half-life, \( A_0 \) is the initial mass, and \( A \) is the mass \( t \) hours after 3 p.m.

Using this equation, solve for \( h \), to the nearest ten thousandth.

\[
\frac{100}{140} = \left( \frac{1}{2} \right)^{\frac{t}{h}}
\]

\[
\frac{\log \frac{100}{140}}{\log \frac{1}{2}} = \frac{5}{x} = \frac{5}{x} = \frac{x}{10.3007}
\]

Determine when the mass of the radioactive substance will be 40 g. Round your answer to the nearest tenth of an hour.

Score 3: The student did not write the equation in terms of \( h \), and did not determine when the substance will be 40 g.
A radioactive substance has a mass of 140 g at 3 p.m. and 100 g at 8 p.m. Write an equation in the form \( A = A_0 \left( \frac{1}{2} \right)^{\frac{t}{h}} \) that models this situation, where \( h \) is the constant representing the number of hours in the half-life, \( A_0 \) is the initial mass, and \( A \) is the mass \( t \) hours after 3 p.m.

\[
100 = 140 \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

Using this equation, solve for \( h \), to the nearest ten thousandth.

\[
\frac{100}{140} = \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

\[
0.7143 = \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

\[
\ln(0.7143) = \frac{5}{h} \ln(0.5)
\]

\[
h = 10.3008
\]

Determine when the mass of the radioactive substance will be 40 g. Round your answer to the nearest tenth of an hour.

\[
40 = 140 \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

\[
0.2857 = \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

\[
\ln(0.2857) = \frac{5}{h} \ln(0.5)
\]

\[
h = 2.8
\]

**Score 3:** The student gave a correct equation, but rounded too early.
A radioactive substance has a mass of 140 g at 3 p.m. and 100 g at 8 p.m. Write an equation in the form \( A = A_0 \left( \frac{1}{2} \right)^{\frac{t}{h}} \) that models this situation, where \( h \) is the constant representing the number of hours in the half-life, \( A_0 \) is the initial mass, and \( A \) is the mass \( t \) hours after 3 p.m.

\[
100 = 140 \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

\[
0.7142 = \left( \frac{1}{2} \right)^{\frac{5}{h}}
\]

\[
0.7142 = \frac{5}{h}
\]

\[
\frac{5}{0.7142} = h = 6.986
\]

Determine when the mass of the radioactive substance will be 40 g. Round your answer to the nearest tenth of an hour.

\[
40 = 140 \left( \frac{1}{2} \right)^{\frac{t}{h}}
\]

\[
\left( \frac{1}{2} \right)^{\frac{t}{h}} = \frac{40}{140}
\]

\[
\left( \frac{1}{2} \right)^{\frac{t}{h}} = \frac{2}{7}
\]

\[
\frac{t}{h} = \log_{\frac{1}{2}} \left( \frac{2}{7} \right)
\]

\[
\frac{t}{h} = 0.56,
\]

\[
1.6 = \frac{t}{h}
\]

\[
\frac{10.297}{1.6} = t = 6.434
\]

Score 2: The student gave a correct equation, but rounded too early and incorrectly rounded \( h \).
A radioactive substance has a mass of 140 g at 3 p.m. and 100 g at 8 p.m. Write an equation in the form \( A = A_0\left(\frac{1}{2}\right)^{\frac{t}{h}} \) that models this situation, where \( h \) is the constant representing the number of hours in the half-life, \( A_0 \) is the initial mass, and \( A \) is the mass \( t \) hours after 3 p.m.

Using this equation, solve for \( h \), to the nearest ten thousandth.

To determine the student’s final examination score (scale score), find the student’s total test raw score in the column labeled “Raw Score” and then locate the scale score that corresponds to that raw score. The scale score is the student’s final examination score. Enter this score in the space labeled “Scale Score” on the student’s answer sheet.

Schools are not permitted to rescore any of the open-ended questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.

Because scale scores corresponding to raw scores in the conversion chart change from one administration to another, it is crucial that for each administration the conversion chart be used to determine the student’s final score. The chart above is usable only for this administration of the Regents Examination in Algebra II (Common Core).
