## BIG IDEAS

## The Big Rule for Solving Inequalities:

All the rules for solving equations apply to inequalities - plus one:
When an inequality is multiplied or divided by any negative number, the direction of the inequality sign changes.

## Inequality Symbols:

$<$ less than $>$ greater than
$\leq$ less than or equal to $\geq$ greater than or equal to $\neq$ not equal to

The solution of an inequality includes any values that make the inequality true.
Solutions to inequalities can be graphed on a number line using open and closed dots.

## Checking Solutions to Inequalities

To check the solution to an inequality, replace the variable in the inequality with a value in the solution set. If the value selected is a correct solution, the simplified inequality will produce a true statement. NOTE: The value selected must be in the solution set.

ANS:
$x \leq \frac{10 b}{b-a}$
Strategy: Use the four column method. Remember that $a>b$.

| Given | $b(x-3)$ | $\geq$ | $a x+7 b$ |

|  |  | below |  |

NOTE: Since $a>b$, the expression $(b-a)$ must be a negative number. When dividing an inequality by a negative number, the direction of the inequality sign must be reversed.
