5 ANS: 3

Because $\overline{HK}$ bisects $\overline{IL}$, $\overline{JI} \cong \overline{JL}$. $\angle HJI$ and $\angle KJL$ are congruent vertical angles. Since $\angle H \cong \angle K$ is given, AAS ≅ AAS.

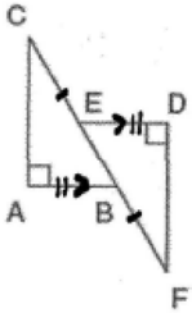
Since $\overline{ED} \parallel \overline{AB}$ and $\overline{CEBF}$ is a transversal, $\angle ABC$ and $\angle DEF$ are alternate interior angles and congruent.



SSS ≅ SSS can not be used because no statement is made that $\overline{AC}$ and $\overline{DF}$ are congruent.

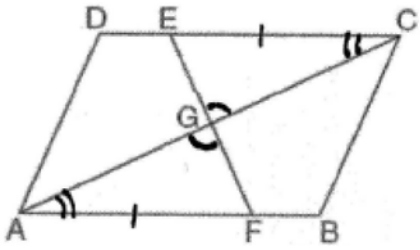
7 ANS: 3

$\angle AGF$ and $\angle CGE$ are congruent vertical angles. Because *ABCD* is a parallelogram, $\overline{AB} \cong \overline{CD}$ and since $\overline{DE} \cong \overline{BF}$, $\overline{AF} \cong \overline{CE}$. Because *ABCD* is a parallelogram, $\overline{AB} \parallel \overline{CD}$ and since $\overline{AGC}$ is a transversal, $\angle CAB$ and $\angle ACD$ are alternate interior angles and congruent.



. This problem can also be solved using elimination. Since they are not right triangles, HL does not apply, AAA only proves similarity and SSA does not prove congruence.
